## Carbon Footprint Statement

Maylan is focused on making precision engineering sustainable, providing our services with a minimal impact on the environment and to minimise our impact on the planet, and completes an annual Carbon Footprint Assessment

Maylan uses a science-based target setting tool to monitor our scope 1 & 2 emissions in order to map our pathway to net zero by 2050 or sooner,

Maylan is also committed to reduce our scope 3 emissions going forward. This includes constant evaluation of the carbon-saving activities of our top 10 suppliers.

Targets are set, regularly measured, monitored, and then reported at least every 12 months.

Stephen Weiss

Managing Director
